

AUTOISO simplifies insulation testing of multi-conductor cables

The [AutoISO-5000](#) adapter for Sonel Insulation Meters vastly simplifies insulation testing of multi-conductor cables, and cuts the time to test by 50 - 75%.

The AutoISO-5000 provides 5 test clips you connect one-time to all conductors. Start the test from a [5kV](#) or [10kV](#) Sonel Insulation Meter and the Auto-ISO rapidly sequences through testing of all conductors in a multi-conductor cable. It's far more efficient than manually un-clipping pairs of test leads, then connecting to the next pair and pressing the Start test button, and repeating this manual process several times for the each conductor pair.

This application note explains: [How the AutoISO-5000 adaptor will save you time and money.](#)
